Joint pain? Arthritis? Inflammation? Green Dragon Superfoods now has a formula to relieve the symptoms of joint pain, tenderness, swelling, and the difficulties of joint mobility associated with osteoarthritis. Joint cartilage contains large molecule protoglycans that give strength and resistance, at the same time providing the flexibility necessary for the compression involving motion. Osteoarthritis is the wearing away of cartilage and the elastic tissue between joints. Connective tissue cells need repair and nutritional support. Inflammation especially needs to be reduced as a result of any tissue injury.
